**HOW TO USE OUR COMPOSTING TOILET?**

1. **SIT PROPERLY IN THE TOILET SEAT**
   - We must sit down, so that when excreting urine it goes through the corresponding deposit and the deposit can fall into the drum underneath.

2. **POUR WATER IN THE URINE DEPOSIT AFTER USING IT**
   - Pour some water in the urine cup using the bottle or container located within reach.

3. **THROW TOILET PAPER INTO THE DEPOSIT**
   - The toilet paper should also fall into the drum under the toilet.

4. **ADD DRYING MATERIAL TO CONTAINER AFTER DEFECATING**
   - After having defecated and thrown the toilet paper in the deposit we must add drying material through the poop deposit until completely covering the deposit. In case of having intestinal problems it is necessary to add extra drying material.

5. **COVER THE TOILET SEAT AFTER USING IT**
   - Place the wooden lid over the toilet seat.

**CAUTION!**
- It is very important that the drying material DOES NOT FALL in the urine cup as this can clog the urine hose.

**BEWARE**
- NOT TO THROW ANY PLASTIC WASTE IN THE TOILET
  - Plastic waste, such as sanitary pads or diapers, should be placed in the special container for this type of waste located next to the separating cup in the composting toilet cabin.
